Chapter 1

Motivation

In today's fast-paced world, where convenience often takes precedence over health and financial considerations, the habit of cooking at home has been gradually eroding. The convenience of ordering food from outside restaurants or opting for ready-made meals has become the norm, leading to several concerning issues. To address these concerns, we have undertaken the development of a software project, "KHABO" aimed at promoting and facilitating home cooking. Our motivation behind this project can be succinctly summarized in the following key points:

1.1 Health and Hygiene Concerns

One of the foremost reasons for our project's motivation is the alarming rise in health and hygiene issues associated with consuming food from outside establishments. Numerous reports of foodborne illnesses, substandard hygiene practices, and low-quality ingredients have raised significant concerns among consumers. By encouraging home cooking, we aim to empower individuals to take control of what they eat, ensuring the highest standards of hygiene and nutrition.

1.2 Economic Benefits

Eating out or ordering from restaurants can significantly strain one's finances over time. The cost of restaurant meals, delivery fees, and service charges add up quickly, making it a financially unsustainable option for many. Our project seeks to motivate individuals to cook at home, which not only promotes healthier eating but also offers substantial cost savings in the long run. By cooking at home, individuals can better manage their food budgets and allocate their resources more effectively.

1.3 Culinary Exploration and Creativity

Cooking is not merely a necessity but also an enjoyable and fulfilling activity. Many individuals have a passion for cooking and take immense pleasure in experimenting with new recipes and flavors. Our project aims to tap into this intrinsic motivation by providing a platform where users can explore a diverse range of recipes, discover new culinary horizons, and develop their cooking skills as a rewarding hobby.

1.4 Sustainable Living

The environmental impact of the food industry, including food packaging waste and emissions from transportation, cannot be ignored. By cooking at home, individuals can make environmentally conscious choices, reduce waste, and contribute to a more sustainable way of living. Our project encourages users to embrace eco-friendly practices by promoting home-cooked meals.

1.5 Ingredient Sourcing Efficiency

We recognize that one of the barriers to cooking at home is the perceived inconvenience of acquiring ingredients. To address this challenge, our project offers a unique feature that intelligently suggests shops where users can find missing ingredients at the most competitive prices. This feature not only simplifies the shopping process but also demonstrates our commitment to making home cooking accessible and affordable.

In summary, our project aims to rekindle the tradition of home cooking by addressing health, financial, and environmental concerns while celebrating the joy of culinary exploration. By providing a user-friendly platform for recipe search and cost-effective ingredient sourcing, we hope to motivate individuals to embrace the practice of cooking at home, ultimately leading to healthier, happier, and more sustainable lives.

Chapter 2

System Overview

KHABO is a multifaceted project that encompasses various modules, each meticulously designed to cater to the diverse needs of culinary enthusiasts and home cooks. Here is an overview of the modules that will constitute KHABO's comprehensive feature set:

2.1 Ingredient Scraper Module

- Manually curates a list of websites for ingredient purchases.
- Extracts data about ingredient type, name, and unit price.
- Regularly updates the data to ensure accurate pricing information.

2.2 Recipe Storage Module

- Scrapes recipes along with ingredients and stores them in a database.
- Accepts community-generated recipes for a diverse recipe collection.

2.3 Cheapest Ingredient Module

- Provides a list of shops selling a specific ingredient.
- Calculates the total cost intelligently, considering factors such as availability, discounts, and delivery time.

2.4 Ingredients to Recipe Module

- Analyzes available ingredients and suggests suitable recipes.

2.5 Recipe Visualizer Module

- Presents recipes in an appealing and user-friendly manner.
- Includes step-by-step instructions and visual aids to enhance cooking experiences.

2.6 Smart Ingredient Replacement Module

- Detects ingredient shortages and recommends suitable substitutes.

Chapter 3

Requirement Analysis using BPMN Diagram

3.1 Feedback Acknowledged

- Original BPMN diagram had an Admin pool which would facilitate user recipe submission evaluation to store them to recipe database. Upon recommendation from advisors, we have dropped the Admin pool and added machine learning (ML) based recipe evaluation lane in the Server pool for faster submission-to-recipe-addition time.

3.2 Pools and Lanes

- User
 - Recipe Search
 - Recipe Proposal
 - Recipe Selection
- Server
 - Pending Recipes Handler
 - Recipe Filter
 - Shops Suggester
 - Recipe Scraper
 - Ingredient Scraper
 - Recipe by Ingredients Handler
 - ML based recipe evaluation

Chapter 11

Project Summary

11.1 Our Progress

At the current stage of development, we have successfully implemented the "Recipe Visualizer Module" and "Search Module (By ingredients and By Recipe Details)". These modules are designed to bring recipes to life, making the cooking process enjoyable and accessible to everyone. With step-by-step instructions, vivid visuals, and user-friendly presentation, it simplifies cooking while maintaining the essence of culinary creativity.

11.2 Future Prospects

While the "Recipe Visualizer Module" marks our initial milestone, we are committed to the continued growth and evolution of KHABO. Our vision is to integrate all modules seamlessly, creating a comprehensive platform that empowers individuals to embark on a journey of culinary exploration and healthier living.

11.3 Upcoming Phases

In the upcoming phases, we will roll out the remaining modules, including the Ingredient Scraper, Recipe Storage, Cheapest Ingredient, Ingredients to Recipe, and Smart Ingredient Replacement Modules. These modules will transform KHABO into a one-stop destination for recipe discovery, ingredient sourcing, cost-effective cooking, and culinary inspiration.

11.4 Conclusion

In summary, KHABO represents a transformative shift towards promoting home cooking, addressing health, financial, and environmental concerns while nurturing the love for culinary creativity. We invite you to join us on this gastronomic adventure as we endeavor to make cooking at home a delightful and enriching experience for all.
